01

THE ASSET CLASS IN BRIEF

How capital is raised

Infrastructure capital is committed for long periods. Allocators review it on that basis.

Private infrastructure covers the physical systems an economy cannot do without: toll roads, airports, ports, water and power networks, fibre, towers, data centres and generation. Allocators buy it for long-dated cash flow that is fixed by contract, set by a regulator or tied to essential usage. The strategy label, from core to opportunistic, tells a committee how much of that cash flow already exists and how much the sponsor still has to build.

Core and core-plus funds own operating, mostly brownfield assets with availability payments, regulated returns or long offtake contracts, and target yield. Value-add and opportunistic funds take construction, ramp-up, merchant or repositioning risk, and target capital growth. Platform strategies sit across that spectrum: a manager backs a development team in renewables, digital infrastructure or transport and grows a pipeline of assets inside one company, often with a long hold in mind.

Committees underwrite infrastructure asset by asset and contract by contract. They want to know who pays, under which document, for how long, with what inflation linkage, and what happens at concession end or the next regulatory reset. A manager who presents its revenue stack, counterparty ratings, debt maturities and construction exposure in the allocator's own vocabulary shortens diligence considerably. This guide sets out the vehicles, metrics, investors and documents that drive those decisions.

STRUCTURE	STRATEGIES	INVESTORS	BASIS OF THE CASE
Closed-ended or open-ended fund, or single-asset vehicle.	Core, core-plus, value-add and greenfield.	Pensions, insurers, sovereign funds, family offices, private wealth.	Contracted or regulated revenue and the life of the asset.

WHO INVESTS

Pension funds	Insurers	Sovereign wealth funds	Family offices	Private wealth platforms

VEHICLES AND FUND LIFE

02 Vehicles used to raise infrastructure equity

VEHICLE	STRUCTURE	LIFE OR LIQUIDITY	WHO ANCHORS	USED FOR
Open-ended core fund	Evergreen vehicle holding operating assets, with periodic subscriptions, redemption queues and quarterly independent valuations.	Perpetual; redemptions subject to queues and gates	Pension funds and insurers seeking steady yield	Long-term exposure to regulated utilities, contracted energy and transport assets with distributed yield.
Closed-end core-plus fund	Limited partnership with commitment drawdowns, buying operating assets with modest growth capex or contract extension upside.	Long fixed term, with extension options	Public pensions, sovereign funds and insurers	Brownfield assets with contracted or regulated revenue and a defined growth plan.
Value-add fund	Limited partnership with an investment period that buys, builds or repositions assets carrying construction, ramp-up or merchant risk.	Fixed term; exits by sale or continuation	Endowments, pensions, sovereign funds, fund of funds	Greenfield development, platform build-outs, digital infrastructure and energy transition businesses.
Platform vehicle	Holding company backing a management team that originates, develops and operates a pipeline of similar assets.	Long hold; recapitalisation or partial sell-down	Sovereign funds and large pensions as partners	Building scale in renewables, fibre, towers, data centres or transport services under one business.
Co-investment, single asset	Side-by-side vehicle on one transaction alongside the main fund, usually at reduced or no fee and carry.	Matches the underlying asset hold	Fund investors with direct infrastructure teams	Large transactions that exceed fund concentration limits, giving investors direct exposure to one asset.
Continuation vehicle	GP-led secondary moving one or more mature assets into a new vehicle with fresh commitments.	New term of several years	Secondary buyers and existing investors electing to roll	Holding de-risked contracted assets beyond the original fund term while offering exiting investors liquidity.

HOW AN INFRASTRUCTURE RAISE MOVES

1. **Strategy and pipeline**
   Define the risk band, sectors and geographies; show seed assets or a named pipeline with contract status.
2. **Anchor commitment**
   Secure one or two anchors, often with fee breaks or co-investment rights, to reach first close.
3. **Subsequent closes**
   Hold several closes over the marketing period, with later investors paying equalisation to earlier ones.
4. **Deploy and operate**
   Acquire or build assets, finance at project level, and manage construction, ramp-up and contract renewals.
5. **Hold or exit**
   Sell to core buyers, list, recapitalise, or transfer to a continuation vehicle for a longer hold.

THE MARKET TODAY

03 Long-dated capital, and much of it invested abroad.

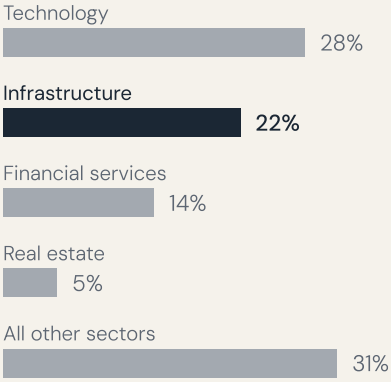

US$102bn
Deployed by Gulf and wider MENA sovereign funds, nine months to September 30, 2026

245
Transactions, 39% of all dealmaking by state-owned investors globally

22%
Share of those deals by number that went to infrastructure

GULF SOVEREIGN DEPLOYMENT BY SECTOR, SHARE OF DEALS BY NUMBER

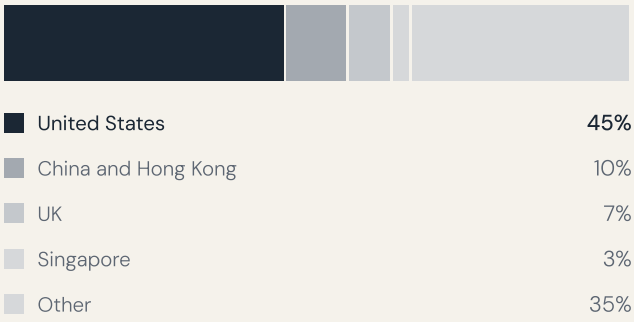

Technology and infrastructure lead recent deployment.

Source: Khaleej Times, October 1, 2026, citing Global SWF's 2026 Mena Playbook.

WHERE THAT CAPITAL WAS INVESTED, SHARE OF VALUE

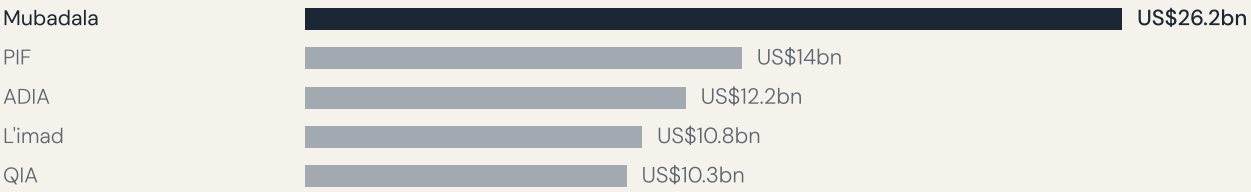

Around 81% went abroad, and the United States took the largest share.

Source: as above. Shares of the value invested by destination.

LARGEST GULF SOVEREIGN DEPLOYERS, FIRST NINE MONTHS OF 2026

Five institutions account for most of the capital deployed.

Source: Khaleej Times, October 1, 2026, citing Global SWF's 2026 Mena Playbook. Deployment covers deals and commitments.

WHAT IT MEANS FOR A RAISE

A manager approaching these institutions should come prepared with a direct and specific case for the sector and the assets.

Deployment figures cover direct deals and commitments together. Figures are as stated by the sources at the dates given. Inaya Advisory is not affiliated with any institution named here.

MARKET DATA

Private Infrastructure in figures

US$224bn

Raised by 71 closed-ended infrastructure funds in 2025, plus US$20bn of co-investment capital.

With Intelligence, Infrastructure Fundraising Report 2025, 17 April 2026

126%

Year-on-year rise in infrastructure capital raised in 2025, a record year globally.

With Intelligence, Infrastructure Fundraising Report 2025, 17 April 2026

Nearly 80%

Share of 2025 infrastructure capital taken by the 20 largest funds, roughly a third of closes.

With Intelligence, Infrastructure Fundraising Report 2025, 17 April 2026

US$1.35tn

Record assets in infrastructure funds, more than double the US$652bn of 2020.

Ocorian, Global value of infrastructure funds hits a record $1.35 trillion, 8 December 2025

US$2.3tn

Global energy transition investment in 2025, a record, with grid investment at US$483bn.

BloombergNEF, Energy Transition Investment Trends 2026 press release, 26 January 2026

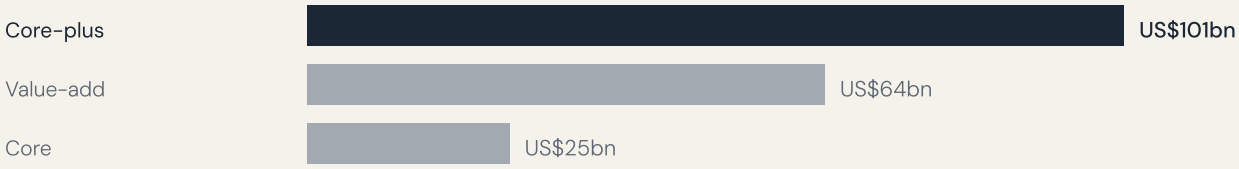

Around US$0.5tn

Estimated data centre investment in 2025, ahead of overall investment in solar.

BloombergNEF, Energy Transition Investment Trends 2026 press release, 26 January 2026

INFRASTRUCTURE CAPITAL RAISED IN 2025 BY STRATEGY

Core-plus took nearly half; core contributed just over 10% of the total.

ALLOCATORS

04 Metrics infrastructure committees test

Contracted or regulated share

Proportion of forecast revenue fixed by concession, offtake, availability payment or a regulated asset base, as opposed to volume or price exposure.

WHAT ALLOCATORS LOOK FOR

A high, documented share for core claims, with remaining contract life shown year by year.

Cash yield

Distributions paid from operating cash flow as a share of invested capital or net asset value, before any sale proceeds.

WHAT ALLOCATORS LOOK FOR

Steady, covered distributions funded by asset cash flow, never by refinancing proceeds or asset sales.

Inflation linkage and pass-through

How far revenue indexes to CPI or similar measures through tariffs, concession terms or regulated allowances, and how costs move against it.

WHAT ALLOCATORS LOOK FOR

Pass-through written into contracts or regulation, with caps, lags and cost indexation mismatches disclosed.

Counterparty credit quality

Credit standing of whoever pays: government grantors, utilities, offtakers, hyperscale tenants or carriers under the revenue contracts.

WHAT ALLOCATORS LOOK FOR

Investment-grade or sovereign-backed payers, concentration limits, and step-in or termination compensation provisions.

Concession length and handback

Remaining term of a concession or lease, and the condition in which assets must return to the grantor at expiry.

WHAT ALLOCATORS LOOK FOR

Valuations that run down to zero where required, and lifecycle capex budgets that meet handback standards.

Regulatory reset risk

Exposure to a regulator revising allowed returns, the asset base or cost allowances at each periodic price control review.

WHAT ALLOCATORS LOOK FOR

Track record through prior resets, regulator relationships, and return sensitivity to a lower allowed return.

Construction and ramp-up risk

Risk that a greenfield asset is late, over budget or underperforms, or that traffic and usage build more slowly than forecast.

WHAT ALLOCATORS LOOK FOR

Fixed-price EPC contracts, contingency, independent engineer sign-off and conservative ramp-up cases tested against comparables.

Merchant and refinancing exposure

Revenue sold at market prices without a contract, and debt maturing before cash flows are secure enough to refinance on similar terms.

WHAT ALLOCATORS LOOK FOR

Capped merchant share, a hedging or contracting plan, and staggered maturities with covenant headroom at higher rates.

DILIGENCE

05 What institutional allocators examine

01
Revenue and contracts
Where the revenue comes from, how much of it is contracted or regulated, who the counterparties are, and how long the contracts run.

02
Regulation and policy
Which permits, concessions and regulations the assets depend on, and how a change in policy would affect them.

03
Operating and construction record
What the team has built, operated or improved before, and how those projects performed against budget and timetable.

04
Horizon and exit
How the holding period matches the investor's own horizon, and how investors can exit over the life of the vehicle.

Revenue contracts and counterparties
Allocators read the concession agreement, power purchase or offtake agreements, tenancy contracts and availability mechanisms themselves. They test termination triggers, compensation on early termination, change-in-law protection, indexation formulae and counterparty concentration, and they map every revenue line in the model back to the clause that supports it.

Technical and construction review
A technical adviser report covers asset condition, remaining useful life and lifecycle capex, and for greenfield assets the EPC contract, contractor credit, schedule float and performance guarantees. Committees compare the adviser's view with the manager's budget and want to see how past build programmes performed against original estimates.

Regulatory and grantor position
For regulated utilities and networks, diligence covers the price control framework, the next reset date, allowed return mechanics, capex and opex allowances and penalty regimes. For concessions, it covers the grantor's history of honouring terms. Political and tariff affordability risk is assessed country by country.

Valuation and discount rates
Committees ask how assets are valued, which discount rates apply by risk band, how those rates moved as interest rates rose, and whether an independent valuer reviews them. They test sensitivity to higher discount rates, lower inflation and terminal value assumptions on assets without a fixed end date.

Capital structure and debt
Allocators examine holding company and project debt separately: amortising or bullet structures, hedging, covenants, cash sweep provisions, maturity profile and refinancing assumptions. Holding company borrowing that funds distributions draws close attention, as does any portfolio-level facility that allows the fund to borrow against its assets.

ESG and transition alignment
Committees review emissions data, physical climate risk on long-lived assets, transition alignment of the portfolio, community and labour practices on construction sites, and supply chain checks on solar and battery equipment. Many require reporting against frameworks they already use, and some exclude fossil fuel exposure outright.

WHO THE CAPITAL SERVES

Infrastructure capital pays for the power lines, ports and networks that people use every day.

06

INVESTORS

The investor map

ALLOCATOR	HOW THEY DECIDE	WHAT THEY WANT
Public pension funds	Through consultants and committees against an infrastructure or real assets allocation, with long approval cycles and established manager relationships.	Inflation-linked yield, predictable distributions, fee discipline, and managers with several prior funds and audited records.
Insurers	Within regulatory capital rules, favouring assets that match long liabilities and qualify for favourable capital treatment.	Long-dated contracted cash flow, investment-grade counterparties, low volatility, and core equity or debt exposure.
Sovereign wealth funds	Centrally, with large tickets, co-investment programmes and, in many cases, direct deal teams able to invest alone.	Scale, co-investment rights, governance seats, sector themes aligned with national priorities, and fee terms reflecting size.
Endowments and foundations	Through small teams and consultants, weighing illiquidity against total portfolio return targets.	Value-add and opportunistic returns, specialist sector managers, and newer managers with a clear sector edge.
Wealth platforms	Through due diligence teams at banks and distributors, focused on liquidity terms and product structure.	Semi-liquid evergreen vehicles with regular subscriptions, distributed yield and a transparent valuation policy.
Fund of funds, secondaries	Portfolio construction across many managers, buying primaries, co-investments and GP-led secondaries.	Access to capacity-constrained funds, discounted entry, and co-investment flow that blends down fees.

GULF SOVEREIGN CAPITAL

Gulf sovereign and quasi-sovereign investors are among the largest infrastructure allocators globally, and many invest both through funds and directly. Ticket sizes are large, so they typically ask for co-investment rights, advisory committee seats and fee terms that reflect scale. Many favour energy transition, digital infrastructure, logistics and utilities that align with domestic diversification plans. Relationships are built over several years, decisions move through layered committees, and managers that show local presence and patience tend to progress further.

FAMILY OFFICES

Single and multi-family offices come to infrastructure for inflation protection and steady yield, but most lack in-house teams able to diligence concessions or regulatory regimes. Many prefer evergreen or semi-liquid vehicles, co-investments in assets they can understand, such as a port, a fibre network or a solar portfolio, and managers introduced through trusted relationships. Ticket sizes vary widely. Larger offices increasingly co-underwrite single assets and expect transparent reporting and a clear view of how and when they exit.

07

IN THE MARKET

Why raises stall, and what fixes them

	WHY IT STALLS	WHAT FIXES IT
1 Revenue risk presented as core	Committees find merchant exposure, short contracts or unproven ramp-up inside a fund marketed as core, and the mismatch undermines trust in the whole pitch.	Label the strategy by contract reality, publish the contracted share by asset, and price the fund for the risk taken.
2 No seed assets or visible pipeline	Blind-pool infrastructure is hard to underwrite when committees cannot see which concessions, contracts or development sites the capital will fund.	Seed two or three assets, or show a named pipeline with exclusivity, permitting stage and contract status for each.
3 Valuations not reset for higher rates	Allocators suspect discount rates lag interest rates, so reported net asset values and track record look overstated against secondary market pricing.	Show discount rate history, independent valuation reviews, and realised exits against carrying values to prove the marks hold.
4 Thin operating and construction team	Infrastructure returns depend on operating and build skill, and a team of dealmakers without asset management experience raises key person and execution concerns.	Present operating partners, asset management staff and construction history, with case studies showing value created after acquisition.
5 Terms that do not suit long holds	Fees on committed capital over a long term, carry paid before assets are proven, or unclear extension rights deter pension and sovereign committees.	Step fees down after the investment period, tie carry to realised or long-held value, and require investor consent for extensions.

TERMS THE MARKET LOOKS AT

Management fee basis

Whether fees run on committed, invested or net asset value, whether they step down after the investment period, and how co-investment and size discounts apply.

Carry and hurdle

For long-hold and core funds, whether carry exists at all, whether it rests on cash yield or valuation, and how hurdle and catch-up suit lower target returns.

Fund term and extensions

Term length matched to asset lives, the number of extensions, who approves them, and what fee applies during extension periods or continuation processes.

GP commitment

Size of the manager's own commitment relative to its balance sheet, whether it is paid in cash, and whether senior team members invest personally.

Key person

Which named individuals trigger suspension of the investment period, how replacements are approved, and whether asset management leaders are covered alongside deal leaders.

ESG commitments

Fund-level and side letter undertakings on exclusions, emissions reporting and transition classification, and the remedies if the portfolio drifts from stated objectives.

Terms are described as general practice in the market. They vary by manager, strategy and allocator, and nothing here states our own fees.

PREPARATION

08 Materials and data room checklist

Infrastructure capital rewards managers who can show where the cash flow comes from and who stands behind it.

Contracts and revenue

- [ ] Concession agreements with amendments and side letters
- [ ] Offtake, PPA and tenancy contracts by asset
- [ ] Counterparty credit ratings and concentration analysis
- [ ] Tariff, indexation and pass-through mechanisms
- [ ] Termination and compensation provisions summary

Technical and regulatory

- [ ] Technical adviser and independent engineer reports
- [ ] EPC contracts, schedules and performance guarantees
- [ ] Regulatory determinations and price control filings
- [ ] Permits, licences and grid connection agreements
- [ ] Insurance programme and claims history

Financial and debt

- [ ] Asset-level financial models with sensitivity cases
- [ ] Valuation reports and discount rate history
- [ ] Facility agreements, hedging and covenant compliance
- [ ] Debt maturity schedule and refinancing plan
- [ ] Audited fund and asset financial statements

Track record and ESG

- [ ] Gross and net returns by asset, realised and unrealised
- [ ] Case studies on construction and operations
- [ ] ESG policy and annual sustainability report
- [ ] Emissions data and climate risk assessment
- [ ] Team biographies, key person and succession plans

09

ON A MANDATE

How we run a mandate

The raises that close are prepared before any investor sees them.

A mandate runs in eight stages. Most of the work that decides it happens before any investor sees the materials, and the relationships it opens continue after the close.

1 The First Conversation

A call with our Client Advisor about the fund or the asset, the target size and the timeline. You leave with a first read on how allocators are likely to receive it.

2 Senior Review

Our senior team reviews the assets, the contracts, the materials and the proposed terms. You then know whether we would take the mandate and what we would change first.

3 Positioning

We prepare the materials around the questions an infrastructure investment committee asks about revenue, contracts, regulation and the team's operating record.

4 Our Network

The raise goes first to the pension funds, family offices, endowments and institutions we work with whose infrastructure allocation fits the strategy and the holding period.

5 Meetings and Diligence

We prepare each investor meeting with you and attend the ones that decide the outcome. Diligence questions are answered as they arrive, so the process does not stall between meetings.

6 Terms and Close

We stay in the conversations through indications of interest, final terms and side letters, until the capital is committed and the raise is closed.

7 Wider Reach

If our network does not cover the full raise, we approach further investors selected for it, with an approach written for each and the same preparation behind every meeting.

8 Investor Relations

After the close, we keep in regular contact with the investors we introduced, through a holding period that can run for many years.

10

THE FIRM

Our services

We work on equity raises only.

Inaya Advisory works with fund managers, sponsors, founders and private wealth principals. Every mandate is run by the people who accepted it, and every engagement is qualified before it begins.

8 stages	US$100 million to several billion	North America, Europe and the Gulf
IN EVERY MANDATE	SIZE OF RAISE	INVESTOR COVERAGE

01

Capital Raising Mandates

A full mandate from positioning to final close. The raise goes to our network first, in the order most likely to bring early commitments.

02

Investor Relations

Investor relationships kept working after the close and between raises. Offered after a mandate or on its own.

03

Targeted Introductions

A personal introduction to a specific investor whose mandate fits, for a raise that is already prepared and in market.

04

Mergers & Acquisitions

Advice to founders, families and principals on a full exit, a succession or the sale of a minority stake.

05

Positioning & Materials

The deck, the track record, the data room and the terms, prepared as an investment committee will read them.

06

Investment Committee Review

Our senior team reviews the raise the way an investment committee will, finds what an allocator will challenge and fixes it before diligence.

11

THE PEOPLE

The people who run the mandate

David Hunter

SENIOR ADVISOR

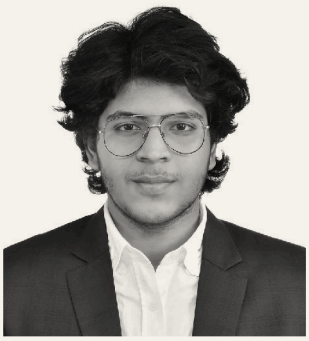

Close to forty years in institutional capital, including as Executive Director and Chief Investment Officer of the North Dakota and the US$40 billion Texas Municipal retirement systems.

Anas Ansar

MANAGING PARTNER

Runs each mandate from the first review of a raise to its final close. Leads origination and senior review with David Hunter, signs each engagement on the firm's behalf, and leads investor relations after the close.

Shayan Mohammed

MANAGING DIRECTOR

Leads the firm's investor coverage across North America, Europe and the Gulf, and decides which investors each mandate reaches, in what order, and when the first introductions are made.

Abbas Chothia

CLIENT ADVISOR

Leads the firm's client conversations, through to an engagement confirmed in writing. Over two decades across principal-level advisory, deal execution and company building.

WHO LEADS EACH STEP

	First conversation	Senior review	Proposed approach call	Positioning and materials	Order of investors	First introductions	Meetings to close	Engagement signed	Investor relations
David Hunter	·	●	●	●	·	●	●	·	●
Anas Ansar	·	●	·	●	·	·	●	●	●
Shayan Mohammed	·	·	·	●	●	·	·	·	·
Abbas Chothia	●	·	●	·	·	·	·	·	·

~40

Years in institutional capital for David Hunter, twenty-four of them in banking

2

US public pension systems he served as Executive Director and Chief Investment Officer

US$40bn

Texas Municipal Retirement System

Roles are as described on inayaadvisory.com. Career figures are from David Hunter's earlier roles and are not transactions of Inaya Advisory.

CONTACT

To discuss a mandate

Every mandate is reviewed before it is accepted, and our answer comes with reasons.

The first conversation is with our Client Advisor. It covers what you are raising and the timeline you are working to, and it is held by video and in confidence.

HOW A MANDATE BEGINS

1

First conversation

By video with Abbas Chothia, our Client Advisor, in confidence.

2

Senior review

David Hunter and Anas Ansar review the raise. The answer comes with reasons.

3

Proposed approach

A call with David Hunter and Abbas Chothia on positioning, order of approach and structure.

4

Engagement

The scope is set in writing and signed by Anas Ansar on the firm's behalf.
